

Aerial Work Platforms

Aerial Work Platforms - There are lots of accessories intended for lift trucks which can be used to help expand the capabilities of your forklift and allow you to lift stuff, handle materials with greater ease or to accomplish clean-up tasks.

Some accessories were specifically designed for the blades themselves. For instance, blade extensions could be used when you need a lot more fork length, that increases lifting capability. Fork extensions come in lengths ranging from forty eight to one hundred twenty inches. Triangular or rounded attachments are another type used whenever transferring rolled material to be able to make sure it does not roll off of the traditional flat blades.

Examples of lifting attachments include pivoting and telescoping boom or crane attachments. They can come in several various kinds and are usually intended for transferring poles, metal bars, lumber and other sort of bulky stuff. Additional attachments like other styles of hooks and hook plates are existing to be able to lift stuff making use of a sling or chain. Magnetic lifters and slab lifters are other objects that can be used along with hook attachments. Slab lifters are specialized attachments that are utilized for lifting various materials which are delivered in a slab or sheet format. Carpet poles and rug rams are other lifting tools that connect to your lift truck so as to make moving rolls of carpet a lot easier. The accessory hooks onto the forklift's forks and has a pole that goes through the center of the carpet roll.

There are many kinds of forklift accessory designed for facility maintenance like for example snow forks. These industrial forks can be connected to front end loaders and used for transferring materials like dirt, and mulch as well as snow. Other popular cleanup accessories comprise standard sweepers and magnetic sweepers. Standard sweepers consist of a broom that the lift truck blades connect onto for sweeping big spaces like warehouse, factory floors and parking lots. The magnetic sweeper is the same except that it has a magnetic plate rather than bristles. The magnetic sweeper is utilized in places where there is lots of metal fragments such as on shop floors for instance. Sweepers have widths up to 60 inches and this surface area makes clean up quick and effortless.

Material spreaders are other accessories utilized on lift trucks. These spreaders are helpful for a variety of applications like spreading rock salt, pellets, fertilizers, insecticides, seed and ice melt.

Work platforms are another optional lifting attachment that many businesses utilize day by day. The platforms range in size from 36" x 36" to up to 60" x 60". There are a few units accessible which are capable of folding up and storing into a smaller space. Work platforms are designed to raise staff up to an overhead location with the use of the lift truck. Larger platform units have additional space for workers to be able to bring tools and other essential objects intended for the job. Often work platforms are constructed of poly material or steel.
