

Doosan Forklift Part

Doosan Forklift Parts - Doosan Infracore Company Ltd. is an intercontinental establishment consisting of Diesel Engines, Defense Industry products, Industrial Vehicles, Construction Technologies and Machine Instruments and Computerization Systems.

In the United States, Doosan Infracore America Corporation is headquartered in Suwanee, Georgia. It is home to a 170,000 square foot production facility, which is the home of the Compact Equipment and Construction department. West Caldwell, New Jersey is home to the Machine Tool division and Cleveland, Ontario is home to the Lift truck division. The U.S. headquarters in Georgia facilitates a first rate parts operation capable of supplying an excess of 25,000 line items to support Lift Truck, Compact Equipment, Machine Tool and Construction customer requirements.

With a network consisting of over 90 independent dealers, the lift truck group provides quality materials handling equipment to the comprehensive North American market. Doosan Infracore America Forklift dealers successfully operate in over 220 service and sales locations all through Canada and the U.S. The lift truck product line impressively features 63 different products consisting of 82 various battery and engine configurations of Electric-powered and Internal Combustion vehicles. Capacities of these various truck models vary from 3,000 to 33,000 lbs. All vehicles are built in an ISO 9001 qualified facility.

Doosan Infracore America is the fastest developing forklift and lift truck corporation in the North American market, due to its excellent level of product performance and their persistently high level of consumer support and service given to all Doosan Infracore Forklift users. The U.S. lift Truck division located in Cleveland has a expert team knowledgeable in Sales, Purchasing, Advertising, Logistical and Technical Support.

Originally the home-based lift truck market in Korea was an open import enterprise. Korea Machinery Co. Ltd. started in 1960, to import fully assembled forklifts as part of a home-based equipment expansion venture. Product sales of these goods were primarily targeted to state-run corporations, large scale corporations, and the military. This ultimately led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun business operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a lift truck manufacturing plant was successfully completed. Continuous technical training became the new focus for improving quality and product development.

Daewoo started the first domestic forklift business in 1967, and rapidly gained a whopping 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's sophisticated technological advancements combined with sales success placed them in a position of significant growth of their forklift operations.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a joint venture project to help them in the very competitive North American materials handling industry. This project proved highly successful for Daewoo and their forklift sales expanded greatly. In 1984, the company completed construction of a new facility to help in manufacturing high end value-added products for export. In 1993, the company had a global sales network and started exporting designs they had established through in-house expertise, as an independent brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing growth opportunities into international marketplaces.
